

## MAIN FUNCTIONS

Ultra-high viscosity and vacuum emulsifying mixer adopts a combination of high emulsifying and low speed stirring and combining. In the processes, the materials are processed repeatedly with heavy shearing force, compressing, grinding, homo-mixing and dispersing. The stirring paddle will scrape the material attached on the inner wall of the tank off as it rotates to increase the effect of homogeneous mixing. Therefore, under high speed processing of this machine, high viscosity, fine particles and homogeneous fluid with soft and beautiful color can be obtained in a single process.

## DETAILS

1. Easy emulsifying through mixing for ultra-high viscosity materials (materials with viscosity greater than 50,000cps) .
2. The machine can suck the materials into its tank directly.
3. This machine can be used for vacuum, heating, pressurizing, and cooling in an in-line manner.
4. Micro-grinding, emulsifying, agitating, homo-mixing and dispersing processes can be completed in a short time.
5. Homo-mixing emulsifying machine and paddle mixer can be used separately.
